## 1 Introduction

Michael Degraw

### 1.1 Purpose

Please write here.

### 1.2 Scope

Please write here.

### 1.3 Definitions, acronyms, and abbreviations

Please write here.

### 1.4 References

Please write here.

### 1.5 Overview

Please write here.

## 2 Overall description

Daniel Dunning

### 2.1 Product perspective

Please write here.

### 2.2 Product functions

Please write here.

### 2.3 User characteristics

Please write here.

### 2.4 Constraints

Please write here.

### 2.5 Assumptions and dependencies

Please write here.

## 3 Specific requirements

Vu Phan

### 3.1 External interface requirements

### 3.2 Classes

#### 3.2.1 cryptosystem/

cryptosystem.h

```
#ifndef CRYPTOSYSTEM_CRYPTOSYSTEM_H_
#define CRYPTOSYSTEM_CRYPTOSYSTEM_H_

////////////////////////////////////
```

```

enum EnumeratedCryptosystem {rsa};

////////////////////////////////////

using IntPtr = mpz_t; // GNU Multiple Precision Integer Type
using Key = IntPtr;
using Text = IntPtr;

////////////////////////////////////

class Cryptosystem {
public:
    virtual void generateKeys(Key publicKey, Key privateKey); // set these

    virtual void encrypt(Text ciphertext, // set this
        const Text plaintext, const Key publicKey);

    virtual void decrypt(Text plaintext, // set this
        const Text ciphertext, const Key privateKey);

    virtual void cryptanalyze(Text plaintext, // set this
        const Text ciphertext, const Key publicKey);
};

////////////////////////////////////

#endif // CRYPTOSYSTEM_CRYPTOSYSTEM_H_

```

rsa.h

```

#ifndef CRYPTOSYSTEM_RSA_H_
#define CRYPTOSYSTEM_RSA_H_

////////////////////////////////////

#include "cryptosystem.h"

////////////////////////////////////

class Rsa : public Cryptosystem {
public:
    void generateKeys(Key publicKey, Key privateKey); // set these

    void encrypt(Text ciphertext, // set this
        const Text plaintext, const Key publicKey);

    void decrypt(Text plaintext, // set this

```

```

    const Text ciphertext, const Key privateKey);

    void cryptanalyze(Text plaintext, // set this
        const Text ciphertext, const Key publicKey);
};

////////////////////////////////////

#endif // CRYPTOSYSTEM_RSA_H_

```

### 3.2.2 party/

party.h

```

#ifndef PARTY_PARTY_H_
#define PARTY_PARTY_H_

////////////////////////////////////

#include "../cryptosystem/cryptosystem.h"

////////////////////////////////////

class Party {
public:
    Cryptosystem cryptosystem;

    Party(EnumeratedCryptosystem enumeratedCryptosystem);
};

////////////////////////////////////

#endif // PARTY_PARTY_H_

```

sender.h

```

#ifndef PARTY_SENDER
#define PARTY_SENDER

////////////////////////////////////

#include "party.h"

////////////////////////////////////

class Sender : public Party {
public:
    Text ciphertext;

```

```

private:
    Text plaintext;

    void setCiphertext(const Key publicKey);
        // {cryptosystem.encrypt(ciphertext, plaintext, publicKey)}
};

////////////////////////////////////

#endif // PARTY_SENDER

```

receiver.h

```

#ifndef PARTY_RECEIVER
#define PARTY_RECEIVER

////////////////////////////////////

#include "party.h"

////////////////////////////////////

class Receiver : public Party {
public:
    Key publicKey;

private:
    Key privateKey;
    Text plaintext;

    void setKeys();
        // {cryptosystem.generateKeys(publicKey, privateKey)}

    void setPlaintext(const Text ciphertext);
        // {cryptosystem.decrypt(plaintext, ciphertext, privateKey)}
};

////////////////////////////////////

#endif // PARTY_RECEIVER

```

eavesdropper.h

```

#ifndef PARTY_EAVESDROPPER
#define PARTY_EAVESDROPPER

////////////////////////////////////

```

```

#include "party.h"

////////////////////////////////////

class Eavesdropper : public Party {
private:
    Text plaintext;

    void setPlaintext(const Text ciphertext, const Key publicKey);
    // {cryptosystem.cryptanalyze(plaintext, ciphertext, publicKey)}
};

////////////////////////////////////

#endif // PARTY_EAVESDROPPER

```

### 3.2.3 cryptoframework.h

```

#ifndef CRYPTOFRAMEWORK_H_
#define CRYPTOFRAMEWORK_H_

////////////////////////////////////

#include "party/sender.h"
#include "party/receiver.h"
#include "party/eavesdropper.h"

////////////////////////////////////

class Cryptoframework {
public:
    Sender sender;
    Receiver receiver;
    Eavesdropper eavesdropper;

    Cryptoframework(EnumeratedCryptosystem enumeratedCryptosystem);

    void testKeyGeneration();
    // {receiver.setKeys()}

    void testEncryption();
    // {sender.setCiphertext(receiver.publicKey)}

    void testDecryption();
    // {receiver.setPlaintext(sender.ciphertext)}

```

```
void testCryptanalysis();  
    // {eavesdropper.setPlaintext(sender.ciphertext, receiver.publicKey)}  
};  
  
////////////////////////////////////  
  
#endif // CRYPTOFRAMEWORK_H_
```

### 3.3 Performance requirements

### 3.4 Design constraints

### 3.5 Software system attributes

### 3.6 Other requirements
