

# **Cry – Project 2**

## (Software Requirements Specification): Interview

Daniel Dunning, Michael Degraw, Vu Phan

2017-02-13

### **Contents**

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Planned Functionality</b>	<b>1</b>
<b>3</b>	<b>Requested Functionality</b>	<b>2</b>

## **1 Introduction**

Vu Phan

**Question 1.** May we use audio-recording?

## **2 Planned Functionality**

**Question 2.** The Cry cryptographic framework will briefly describe whether your created cryptographic algorithm is breakable within a given time frame. Would it be helpful to have a more detailed report? If so, what other information should be on that report?

**Question 3.** Cry will have some built-in cryptographic algorithms, including *RSA* and *Diffie-Helman*. What other cryptographic algorithms (such as hashing algorithms and network stream ciphers) should be included and why?

### **3 Requested Functionality**

Michael Degraw

**Question 4.** Example: Do you want Cry to support feature foo?

**Question 5.** Add other questions if needed.
